

Language Comparison Report: Meditation

Editions: en.wikipedia, de.wikipedia, fr.wikipedia, es.wikipedia, it.wikipedia · period 2023-09 to 2026-08 · generated 2026-09-27T12:36:32+00:00 · source: Wikimedia Analytics API

1. Recommendation

No option stands out on reader attention yet.

- No option has both a sizeable audience (12,000 views a year or more, at or above the median) and a change within 10% of its edition. Treat every option as unproven until other sources confirm demand.
- The largest audience is en.wikipedia: 311,869 views a year, at or above the median of the compared set (31,017); -20.8% year over year, against -7.0% for the whole edition: 14.9% worse than the edition as a whole.
- Monitor: en.wikipedia, de.wikipedia, it.wikipedia.
- Deprioritise: fr.wikipedia (31,017 views a year; -44.4% year over year, against -10.6% for the whole edition: 37.8% worse than the edition as a whole), es.wikipedia (25,633 views a year; -57.1% year over year, against -20.9% for the whole edition: 45.8% worse than the edition as a whole).

Basis: Wikipedia reader attention only, not revenue or product demand. This is not a go/no-go or investment call: before committing budget, confirm with search volume, app-store demand and customer interviews.

Rule: validate first = at least 12,000 views a year, demand at or above the median of the compared set and a year-over-year change within 10% of the edition's (share-adjusted) or better; deprioritise = under 12,000 views a year, or 25% or more behind the edition; monitor = the rest.

2. KPI Breakdown

- **Demand (views, last 12 months):** en.wikipedia 311,869 · de.wikipedia 56,910 · fr.wikipedia 31,017 · es.wikipedia 25,633 · it.wikipedia 17,203
- **Growth (year over year):** en.wikipedia -20.8% · de.wikipedia -17.2% · fr.wikipedia -44.4% · es.wikipedia -57.1% · it.wikipedia -20.5%
- **Growth (3-year CAGR):** en.wikipedia -17.9% · de.wikipedia -15.1% · fr.wikipedia -19.8% · es.wikipedia -39.6% · it.wikipedia -31.4%
- **Momentum (last 3 months):** accelerating: en.wikipedia, de.wikipedia, fr.wikipedia, it.wikipedia; decelerating: es.wikipedia
- **Affinity:** en.wikipedia 0.94 · de.wikipedia 1.64 · fr.wikipedia 1.06 · es.wikipedia 0.96 · it.wikipedia 0.91
- **Seasonality and stability:** moderately seasonal: en.wikipedia, de.wikipedia; highly seasonal: fr.wikipedia, es.wikipedia, it.wikipedia
- **Anomalies:** en.wikipedia 3 · de.wikipedia 2 · fr.wikipedia 0 · es.wikipedia 0 · it.wikipedia 1
- **Data quality:** HIGH: en.wikipedia, de.wikipedia, fr.wikipedia, es.wikipedia, it.wikipedia

3. Summary

- en.wikipedia had the most pageviews: 311.9K in the last 12 months (70.5% of the topic's views across the compared editions).
- The topic took the largest share of its edition's traffic in de.wikipedia: 6.7 views per million.
- The highest topic affinity was in de.wikipedia: 1.64× the compared average.
- Year-over-year change ranged from -57.1% (es.wikipedia) to -17.2% (de.wikipedia).

4. Topic Definition

Canonical topic	Meditation
Wikidata ID	Q108458
Resolution method	exact title
Resolution confidence	0.98

Edition	Article	Page ID
en.wikipedia	Meditation	20062
de.wikipedia	Meditation	28837
fr.wikipedia	Méditation	1533268
es.wikipedia	Meditación	72116
it.wikipedia	Meditazione	16979

5. Language Opportunity

Edition	Views (12M)	YoY	3Y CAGR	3M	Unique devices	Topic share	Penetration (per M)	Affinity	Quadrant
en.wikipedia	311,869	-20.8 %	-17.9%	+58.4 %	n/a	70.5%	3.8	0.94	established
de.wikipedia	56,910	-17.2 %	-15.1%	+3.1%	n/a	12.9%	6.7	1.64	established
fr.wikipedia	31,017	-44.4 %	-19.8%	+9.5%	n/a	7.0%	4.3	1.06	established
es.wikipedia	25,633	-57.1 %	-39.6%	-15.2 %	n/a	5.8%	3.9	0.96	watch
it.wikipedia	17,203	-20.5 %	-31.4%	+7.9%	n/a	3.9%	3.7	0.91	watch

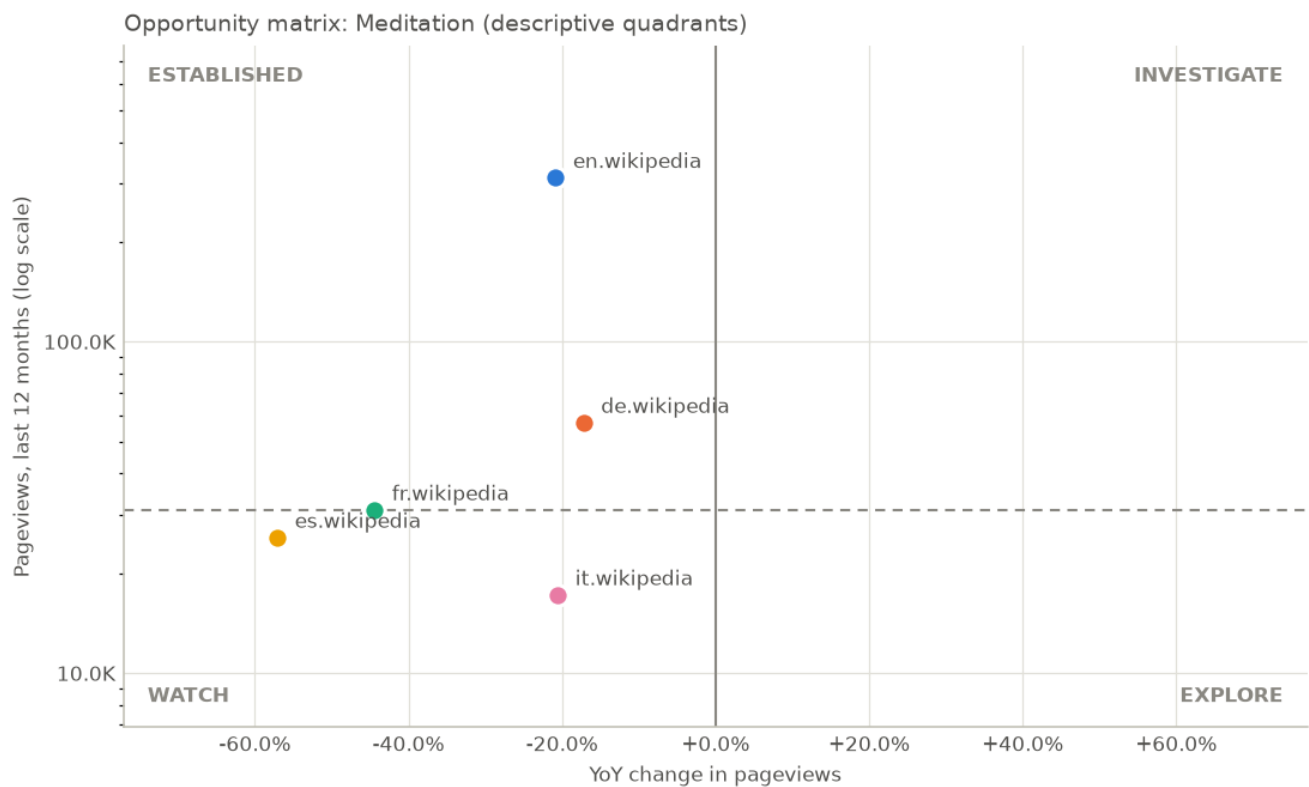

Decision signals

Five separate signals, each from one written rule. They are evidence for a human decision: they are not combined into a score and are not a recommendation to buy or invest.

Edition	Market size (reader attention)	Growth	Momentum	Localization	Stability
en.wikipedia	high	declining	accelerating	moderate	moderately seasonal
de.wikipedia	low	declining	accelerating	strong	moderately seasonal
fr.wikipedia	low	declining	accelerating	moderate	highly seasonal
es.wikipedia	low	declining	decelerating	moderate	highly seasonal
it.wikipedia	low	declining	accelerating	moderate	highly seasonal

Rules: market size by views in the last 12 months (very low under 12,000, low under 60,000, medium under 300,000, high under 1,500,000); growth by the 3-year CAGR (declining under -3%, stable under +3%, growing under +15%); momentum by ± 5 points of acceleration; localization by affinity (weak under 0.80, strong from 1.25); stability by anomaly episodes, then the seasonal peak (moderately seasonal from 1.12x, highly from 1.30x). Each edition's own report explains its readings with the numbers.

6. Opportunity Matrix

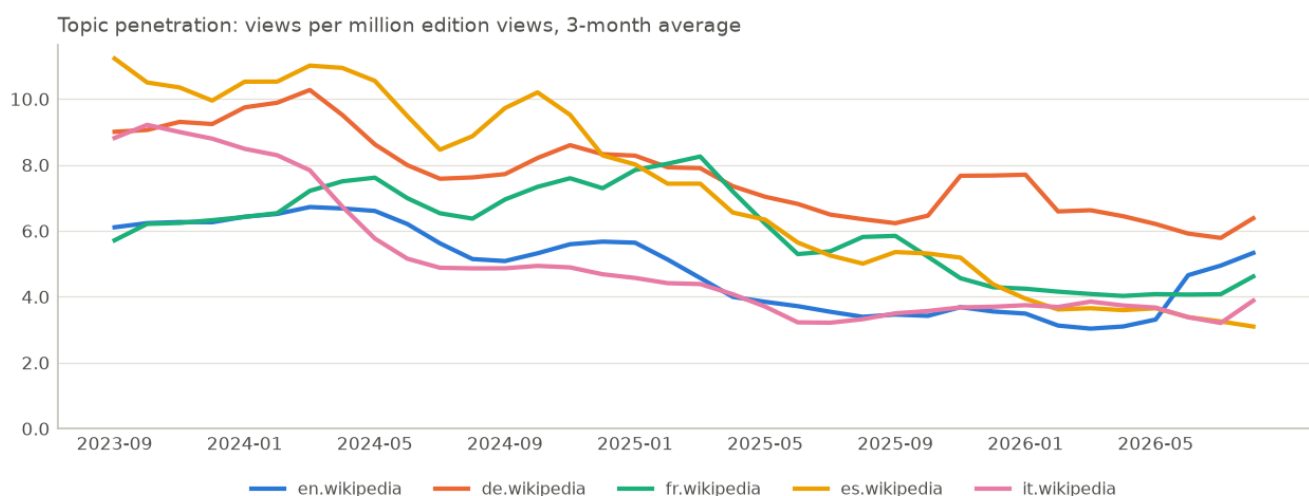

Each edition is a point: historical growth (YoY) across, absolute demand (views in the last 12 months, log scale) up. Splits: growth above 0% YoY; demand at or above the median of the compared editions (31,017 views). The split is relative to this set of editions.

- **investigate**: growing and above-median demand
- **explore**: growing, below-median demand
- **established**: not growing, above-median demand
- **watch**: not growing, below-median demand

Quadrant names are descriptive labels, not investment recommendations.

7. Localization

Topic penetration: the topic's views per million views of its edition, month by month.

- Country distribution: Wikimedia publishes country data per edition, not per article, so it cannot be measured for a topic.

- A language edition is not a country: readers of en.wikipedia live in many countries.
- A language edition is not a country: readers of de.wikipedia live in many countries.
- A language edition is not a country: readers of fr.wikipedia live in many countries.
- A language edition is not a country: readers of es.wikipedia live in many countries.
- A language edition is not a country: readers of it.wikipedia live in many countries.

8. Definitions

- Topic share: an edition's topic views / topic views across the compared editions (last 12 months).
- Wikipedia topic penetration: topic views / all views of that edition (last 12 months), shown per million views. Not market penetration.
- Topic affinity: (topic views / edition views) / (topic views / edition views across the compared editions). 1.0 means the same share of attention as the compared set; it is this system's own measure, relative to the editions compared, not an official Wikimedia metric.
- Unique devices: Wikimedia publishes them per edition only, never per article, so the column is always n/a.

9. Data Quality

Edition	Status	Coverage	Quality	Anomalies
en.wikipedia	OK	100.0%	HIGH	2026-06 +122.2%; 2026-07 +40.2%; 2026-08 +45.6%
de.wikipedia	OK	100.0%	HIGH	2025-11 +43.3%; 2026-08 +40.5%
fr.wikipedia	OK	100.0%	HIGH	0
es.wikipedia	OK	100.0%	HIGH	0
it.wikipedia	OK	100.0%	HIGH	2026-08 +60.2%

10. Business Implications

What the data supports

- en.wikipedia had the most pageviews: 311.9K in the last 12 months (70.5% of the topic's views across the compared editions).
- The topic took the largest share of its edition's traffic in de.wikipedia: 6.7 views per million.
- The highest topic affinity was in de.wikipedia: 1.64x the compared average.
- Year-over-year change ranged from -57.1% (es.wikipedia) to -17.2% (de.wikipedia).

What the data does NOT establish

- Revenue, market size (TAM) or willingness to pay: pageviews measure attention, not purchasing.
- That the order of editions reflects market attractiveness: it reflects Wikipedia reading only.
- Causes of any change: the data shows that traffic moved, not why.
- That readers of related articles, or of other language editions, share this trend.

Questions requiring further validation

- Does search volume (e.g. Google Trends) show the same direction in this language?
- Is there App Store / Google Play demand for products on this topic in this language?
- What do competitors in this category earn, and how large is the addressable market?
- Will people pay? What do customer interviews and landing-page conversion rates show?
- What would customer acquisition cost, retention and monetization look like?
